Information

2011

Supporting the Creation of Cadastral GIS data

- Towns are responsible for decisions regarding the creation and update of Tax maps and digital parcel data
- There was a grant program to support development of digital data in the early 1990's
- There is talk of providing grant data once again to complete the creation of digital data and to encourage consistency

Compiling and Distributing

- Regional Planning Commissions (RPCs) have agreed to collect updated data from their member towns
- RPCs make sure data doesn't include names and phone numbers, and create basic metadata for each file
- VCGI makes data available for download at our web site

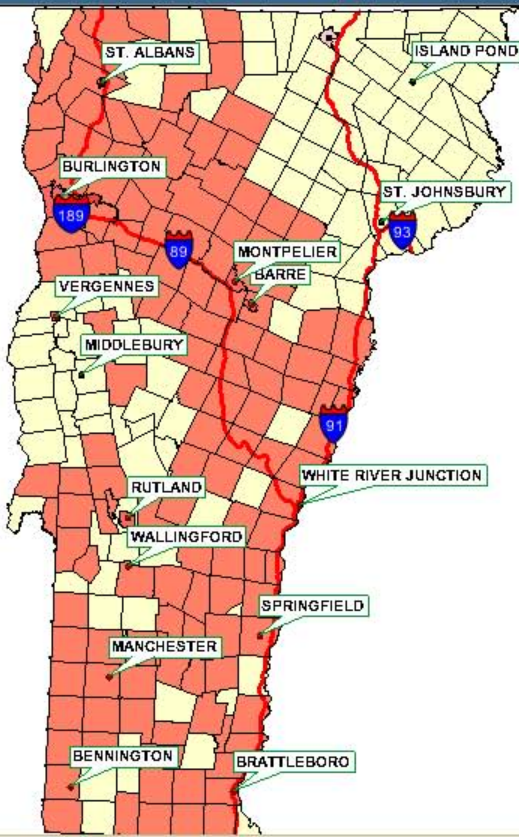

VCGI VGIS Tiled Data Download Tool

Merge Cadastral Data into a Single Statewide Layer?

- In process of creating/updating cadastral data standard (previously a guideline)
 - But who enforces? Municipal Planning Grant program....
- There is some interest in creating a single data layer (Legislature and Tax Dept.)
- Probably no resources to tackle this yet.
