DAVID B: STRUHS Commissioner

SUBSURFACE SEWAGE DISPOSAL SYSTEM INSPECTION FORM PART A CERTIFICATION

Property Address: 6 TEABERRY LANE, AMHERST Address of Owner: MA. WILLIS Date of Inspection: Alan E. Weiss, R.S., M.S. I am a DEF approved system inspector pursuant to Section 15.340 of Title 5 (310 CMR 15.000) Company Name: Cold Spring Environmental, Inc. Mailing Address: 350 Old Enfield Ed., Belchertown, MA. 01007 Telephone Number: (413) 323-5957

CERTIFICATION STATEMENT

I certify that I have personally inspected the sewage disposal system at this address and that the information reported below is true, accurate and complete as of the time of inspection. The inspection was performed based on my training and experience in the proper function and maintenance of on-site sewage disposal systems. The system:

Passes Conditionally Passes ALAN F WEL Needs Further Evaluation By the Local Approving Authority REG. #933 1001197 Inspector's Signature:

The System Inspector shall submit a copy of this inspection report to the Approving Authority within thirty (Softwars of completing this inspection. If the system is a shared system or has a design flow of 10,000 gpd or greater, the inspector and the system owner shall submit the report to the appropriate regional office of the Department of Environmental Protection. The original should be sent to the system owner and copies sent to the buyer, if applicable, and the approving authority.

INSPECTION SUMMARY: Check A, B, C, or D:

A) SYSTEM PASSES:

I have not found any information which indicates that the system violates any of the failure criteria as defined in 310 CMR 15.303. Any failure criteria not evaluated are indicated below.

COMMENTS:

BJ SYSTEM CONDITIONALLY PASSES:

____ One or more system components as described in the "Conditional Pass" section need to be replaced or repaired. The system, upon completion of the replacement or repair, as approved by the Board of Health, will pass.

Indicate yes, no, or not determined (Y, N, or ND). Describe basis of determination in all instances. If "not determined", explain why not.

The septic tank is metal, unless the owner or operator has provided the system inspector with a copy of a Certificate of Compliance (attached) indicating that the tank was installed within twenty (20) years prior to the date of the inspection; or the septic tank, whether or not metal, is cracked, structurally unsound, shows substantial infiltration or exfiltration, or tank failure is imminent. The system will pass inspection if the existing septic tank is replaced with a conforming septic tank as approved by the Board of Health.

RECEIVED OCT

6 1997

(revised 04/25/97)

DEP on the World Wide Web: http://www.magnet.state.ma.us/dep

Property Address: 6 TEA BALLY Owner: WILLIS Date of Inspection: 10/197

B] SYSTEM CONDITIONALLY PASSES (continued)

Sewage backup or breakout or high static water level observed in the distribution box is due to broken or obstructed pipe(s) or due to a broken, settled or uneven distribution box. The system will pass inspection if (with approval of the Board of Health). Describe observations:

- broken pipe(s) are replaced
- obstruction is removed
- distribution box is levelled or replaced

The system required pumping more than four times a year due to broken or obstructed pipe(s). The system will pass inspection if (with approval of the Board of Health):

broken pipe(s) are replaced

_____ obstruction is removed

C] FURTHER EVALUATION IS REQUIRED BY THE BOARD OF HEALTH:

Conditions exist which require further evaluation by the Board of Health in order to determine if the system is failing to protect the public health, safety and the environment.

1) SYSTEM WILL PASS UNLESS BOARD OF HEALTH DETERMINES THAT THE SYSTEM IS NOT FUNCTIONING IN A MANNER 3 WHICH WILL PROTECT THE PUBLIC HEALTH AND SAFETY AND THE ENVIRONMENT:

Cesspool or privy is within 50 feet of a surface water

Cesspool or privy is within 50 feet of a bordering vegetated wetland or a salt marsh.

- 2) SYSTEM WILL FAIL UNLESS THE BOARD OF HEALTH (AND PUBLIC WATER SUPPLIER, IF APPROPRIATE) DETERMINES THAT THE SYSTEM IS FUNCTIONING IN A MANNER THAT PROTECTS THE PUBLIC HEALTH AND SAFETY AND THE ENVIRONMENT:
 - - _____ The system has a septic tank and soil absorption system and the SAS is within a Zone I of a public water supply well.
 - The system has a septic tank and soil absorption system and the SAS is within 50 feet of a private water supply well.
 - The system has a septic tank and soil absorption system and the SAS is less than 100 feet but 50 feet or more from a private vater supply well, unless a well water analysis for colliform bacteria and volatile organic compounds indicates that the well is free from pollution from that facility and the presence of ammonia nitrogen and nitrate nitrogen is equal to or less than 5 ppm. Method used to determine distance _______ (approximation not valid).

D] SYSTEM FAILS:

You must indicate either "Yes" or "No" as to each of the following:

I have determined that the system violates one or more of the following failure criteria as defined in 310 CMR 15.303. The basis for this determination is identified below. The Board of Health should be contacted to determine what will be necessary to correct the failure.

Yes No ~ V

Backup of sewage into facility or system component due to an overloaded or clogged SAS or cesspool.

Discharge or ponding of effluent to the surface of the ground or surface waters due to an overloaded or clogged SAS or cesspool.

Static liquid level in the distribution box above outlet invert due to an overloaded or clogged SAS or cesspool.

Liquid depth in cesspool is less than 6" below invert or available volume is less than 1/2 day flow.

Required pumping more than 4 times in the last year <u>NOT</u> due to clogged or obstructed pipe(s). Number of times pumped ______

Any portion of the Soil Absorption System, cesspool or privy is below the high groundwater elevation

Any portion of a cesspool or privy is within 100 feet of a surface water supply or tributary to a surface water supply.

Any portion of a cesspool or privy is within a Zone I of a public well.

Any portion of a cesspool or privy is within 50 feet of a private water supply well.

Any portion of a cesspool or privy is less than 100 feet but greater than 50 feet from a private water supply well with no acceptable water quality analysis. If the well has been analyzed to be acceptable, attach copy of well water analysis for coliform bacteria, volatile organic compounds, ammonia nitrogen and nitrate nitrogen.

E] LARGE SYSTEM FAILS:

You must indicate either "Yes" or "No" as to each of the following:

The following criteria apply to large systems in addition to the criteria above:

The system serves a facility with a design flow of 10,000 gpd or greater (Large System) and the system is a significant threat to public health and safety and the environment because one or more of the following conditions exist:

Yes	No	
	—	the system is within 400 feet of a surface drinking water supply
_	_	the system is within 200 feet of a tributary to a surface drinking water supply
	-	the system is located in a nitrogen sensitive area (Interim Wellhead Protection Area - IWPA) or a mapped Zone II of a public water supply well)

The owner or operator of any such system shall bring the system and facility into full compliance with the groundwater treatment program requirements of 314 CMR 5.00 and 6.00. Please consult the local regional office of the Department for further information.

SUBSURFACE SEWAGE DISPOSAL SYSTEM INSPECTION FORM PART B CHECKLIST

5

Property Address: 6 TEABERRY LANE. Owner: WILLIS Date of Inspection: rolilgz

:

Check if the following have been done: You must indicate either "Yes" or "No" as to each of the following:

	Pumping information was provided by the owner, occupant, or Board of Health.
-	None of the system components have been pumped for at least two weeks and the system has been receiving normal flow rates during that period. Large volumes of water have not been introduced into the system recently or as part of this inspection.
	As built plans have been obtained and examined. Note if they are not available with N/A.
_	The facility or dwelling was inspected for signs of sewage back-up.
	The system does not receive non-sanitary or industrial waste flow.
	The site was inspected for signs of breakout
12	All system components, excluding the Soil Absorption System, have been located on the site.
	The septic tank manholes were uncovered, opened, and the interior of the septic tank was inspected for condition of baffles or tees, material of construction, dimensions, depth of liquid, depth of sludge, depth of scum.
The	size and location of the Soil Absorption System on the site has been determined by
· · · · · ·	The facility owner (and occupants, if different from owner) were provided with information on the proper maintenance of Sub-Surface Disposal System.
	Existing information. Ex. Plan at B.O.H.
	Determined in the field (if any of the failure criteria related to Part C is at issue, approximation of distance is unacceptable) [15.302(3)(b)]
